

your single  
source project  
solution.  
that's  
a big plus.

**DEMO PLUS**  
Demolition+Abatement+Recycling

assessment + abatement + demolition

When it comes to big jobs, we're your single source project solution. Demo Plus, Inc. partners with Bennett Environmental, LLC and Environmental Consulting Resources to offer you a single-source bid and total project management.

When the first step is environmental compliance with quick turn-around, the professionals at Environmental Consulting Resources get you the green light faster. ECR performs services ranging from Phase I and II assessments and asbestos abatement counseling to indoor air quality, lead and mold consulting services, underground storage tank services and more.

If asbestos abatement is required, Bennett Environmental is there to provide the best solution for the project and your budget plus leading-edge expertise in lead-based paint, mold, remediation and avian control. Working within your project schedules and time constraints, we employ value engineering and multiple systems to determine the best long-term solution for your environmental challenge.

When it comes to the final step of demolition or dismantling structures, Demo Plus does it right. Recognized as one of the most respected demolition companies in the region with multiple green certifications, Demo Plus assesses your project to identify the best strategy for tear-down. After demolition, Demo Plus performs site clearance, grading and excavation while recycling up to 85% of site debris.
